

Next Generation Anaerobic Digester Systems

Evolving Technology

- CH Four designed and built our first digester system in 2006/2007
- Each system since has been augmented by the lessons and knowledge gained by continuing research and involvement with our finished projects
- A system built in 2015 will drastically outperform one built in 2006 because we constantly aim to improve our product

New Generation of Digester

- This recently completed 2,500 m³ digester represents the latest CH Four Biogas design, where 10 years of advancements is captured.
- It includes provisions to accommodate the next generation upgrades already.

Delta B.C., Canada. Completed early
2015

New Generation of Performance

- This facility will easily produce 1MW of continuous energy from a much smaller footprint than was possible before.
- The unit incorporates the latest & proven advancements in feedstock preprocessing, mixing, and integrated gas storage, among others.

Integrated Reception

- Our industry leading reception tanks ensure the digester is fed by a homogeneous, energy rich slurry, which creates predictable and continuous gas flows
- Using multi purpose and sealed reception tanks allows operators to take a wide variety of high strength feedstock's, while limiting site odors.

Left: Solids receiving tank with chute and steel lid.

Above: Liquids receiving tank with cam lock fitting.

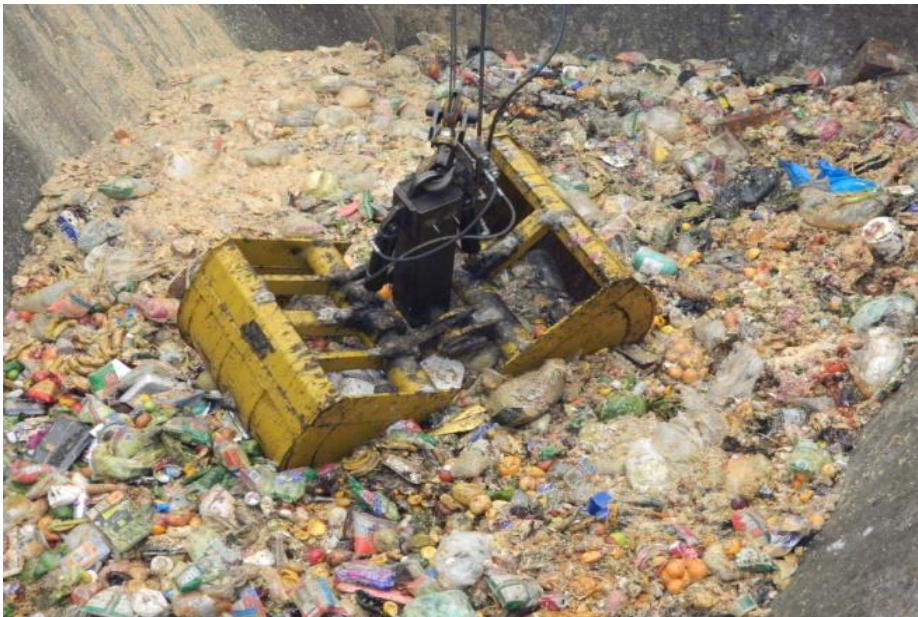

Digestate Management

- From the beginning to our latest projects, CH Four has an emphasis on complete system solutions, front end feeding, back end management, everything between.
- Separating fibres for animal bedding, separating raw nutrients for fertilizer's & soil management, or effluent treatment are all available with a CH Four system.

Our Group

- Update CH-Four Technology.
- Operational capabilities – Jack Chan
- Organics market and new opportunities
- Moving forward

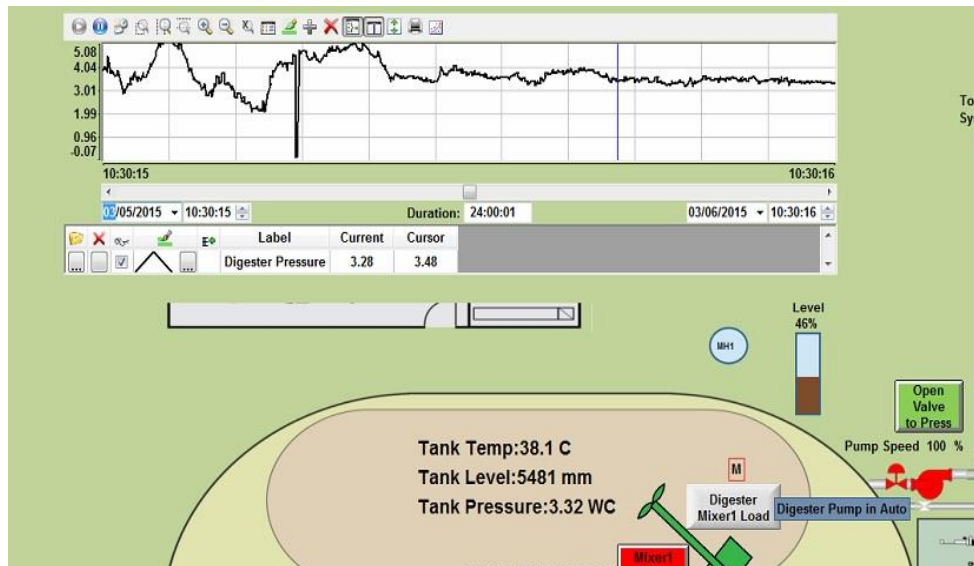

Feedstock Considerations

- Organics market is very dynamic
- Opportunities we would like to tap together

Operations & Financing

- Our team can offer the full range of services:
- Compliance Environmental Services brings the waste water experience and licences to the team
- Elemental Energy is our financing partner

Proven Track Record

- At CH Four Biogas we have been designing, installing and supporting biogas systems for over 10 years.
- Our focus is on creating value for our clients and partners
- We continue to offer the highest level of service in the industry

Our team & trusted partners at
Seabreeze Agri-Energy,
completed January, 2015
